

Check-list of Blattaria, Mantodea, Orthoptera and Dermaptera of the Czech and Slovak Republics

Petr Kočárek, Jaroslav Holuša & Ľubomír Vidlička

Abstract

The list of all 14 Blattaria, 1 Mantodea, 124 Orthoptera and 7 Dermaptera recognized species of the Czech and Slovak Republics is presented including the information about their presence in the individual historical countries.

In the territory of the Czech Republic the first works about orthopteroid insects were published in the middle of the 19th century (SEIDL 1836, FIEBER 1853). These studies were followed by several studies dated around the beginning of the 20th century (KREJČÍ 1896, 1903, HAURY & NICKERL 1905, CZIŽEK 1905, 1915, 1917, ZACHER 1907, 1913). In Slovakia orthopteroid insects were studied initially by Austria-Hungarian authors (FRIWALDSKY 1867, PUNGUR 1891, 1899, CHYZER 1897 and EBNER 1914). After the comprehensive monograph (OBENBERGER 1926) the research of orthopteroid insects increased and till 1998 nearly 500 works were published. The only check-list was completed by MAŘAN & ČEJCHAN (1977).

From that time the number of species increased, which is based partly on the discovery of new species and partly on the inclusion of species that were previously overlooked. Beside that several species were described and there were some taxonomic and nomenclatoric changes. On the other hand some species have probably extinct.

The Check-list is based especially on recent findings and on the revision of specimens deposited in the majority of important museums and private collections. Old data from the literature were accepted only in species, which occurrence is possible regarding to their known geographic distribution. Species not documented with relevant collection specimens are marked by ?, specimens not found after 1965 are marked by †. Within each families and subfamilies, the names are listed alphabetically.

The Czech Republic is traditionally divided into two main countries (Fig. 1): Bohemia and Moravia (including the Czech part of Silesia). We have accepted this division commonly used in the Czech faunistic and floristic works.

The classification of Orthoptera has been based on the recent European Check-list (HELLER et al. 1998), the classification of Blattaria has been adopted from PRINCIS (1960) and the classification of Dermaptera from STEINMANN (1989).

Abbreviations:

B - Bohemia

M - Moravia

S - Slovakia

† - old data, species not recorded after 1965

? - disputed data, the occurrence is necessary to confirm

ⁱ - introduced species

^s - synantropic species
